

Rewrite the Organic Rules!

As avid consumers of organic produce and supporters of organic farms, we oppose the USDA's proposed organic standards which contradict the basic philosophy of sustainable agriculture.

We urge the following:

- ♦ Follow the Guidelines of the NOSB that reflects the current practices of farmers we trust.
- ♦ Do not allow Genetically Engineered Organisms, Sewage Sludge and Ionizing Radiation to be considered part of organic production practices.
- ♦ Require Higher Standards for Livestock Production.

Keep Organic Clean!

Signed,
